Title: Mapping Movement in Malaysia - Understanding Public Transport System

Introduction: This visualization explore how MRT, LRT and KTM system are distributed and used across Malaysia, revealing key mobility patterns.

Title: Distribution of Public Transport Fare

Annotation: Fare vary across transport Mode and is normal distribution.

Insight: Consistent fare structures may improve accessibility

Title: Public transport Usage

Small dot = low ridership
medium = moderate
Large = High

Annotation: Larger nodes indicating higher ridership concentrated in urban Area.

Insight: Highly concentrated in urban area for example KL

Conclusion: The increasing trend in ridership indicates a strengthening demand for public transportation reinforcing its role in supporting urban mobility in Malaysia.

Title: Services carried most passengers in 2025

Annotation: Ridership is evenly distributed, small number of services carried the majority of passengers.

Insight: Passengers demand is concentrated in key services, highlighting the importance of major transport corridors.

Title: Total Ridership Trend

Annotation: The Line chart shows monthly total ridership from 2023 to 2025, highlighting overall trends and short-term fluctuations over time.

Insight: Overall, the increasing trend in ridership indicates a strengthening demand for public transportation.
